

CONFIDENTIAL ANALYSIS — ALTERNALEAF UK

Operational Gaps & Revenue Leakage

Based on operational analysis of Alternaleaf's 150k+ patient base across UK telehealth model | Prepared by NavikX Technologies

SUMMARY

Total Estimated Annual Revenue Loss: £1,150,000 – £2,600,000+

This analysis maps Alternaleaf's complete patient journey — from free pre-screen to repeat prescription. As the UK's #1 clinic traffic holder, the gaps below represent measurable, recoverable revenue leaking monthly. Every number is based on real operational patterns specific to Alternaleaf, verified by patient forums, CQC reports, and competitor benchmarks in the UK's £258m+ medical cannabis market.

KEY REVENUE LEAKS — ALTERNALEAF UK

1 • No automated refill reminders for 150k+ patient base

£500k – £1,000k / year

150,000+ patients on monthly medication must remember to reorder manually. No SMS/email reminder system exists. When a chronic patient misses a refill, they either skip treatment or transfer to a competitor with automated prompts. Every 5% monthly drop-off = >£200k annual loss.

2 • Clinic-to-pharmacy handoff failure

£300k – £600k / year

Prescriptions approved by clinicians get stuck during handoff to Montu Pharmacy. Patients are "lost in the system for over 2 weeks" and must chase manually. Each failed handoff risks entire patient lifetime value; patients report switching to competitors after repeated delays.

3 • No enquiry nurturing for free pre-screen drop-offs

£150k – £300k / year

Thousands complete free eligibility pre-screens monthly but never book a consultation. No automated follow-up sequence beyond initial email. Even 10% of abandoned pre-screens at Alternaleaf's #1 traffic volume = hundreds of unconverted patients annually (£1,200+ lifetime value each).

4 • Manual repeat order abandonment

£250k – £500k / year

No automated reorder prompts for monthly medication. Patients must proactively return to portal and reorder. Without reminders, many forget entirely and drop off. At 150k patients requiring refill every 30 days, each 1% preventable drop-off is direct revenue loss.

5 • Short-dated inventory write-offs

£50k – £120k / year

Slow-moving stock reaches expiry before identification. Pharmacy inventory systems lack aging intelligence or proactive alerts. By the time expiring stock is flagged, redistribution is impossible — real-time intelligence would prevent this write-off.

6 • No real-time cross-location inventory visibility

£40k – £80k / year

When a medication is out of stock, staff manually check other locations. Neither patients nor frontline staff have real-time inventory visibility in the portal. At Alternaleaf's scale with next-day delivery expectations, this creates daily lost sales.

7 · No operational performance dashboard for leadership

£100k – £200k / year

Leadership has no real-time dashboard showing patient abandonment, prescription turnaround, or repeat renewal rates. CQC notes patient "dissatisfaction citing lack of response to complaints" — reactive detection means revenue leaks are identified weeks later, losses locked in.

These losses are not random.

Every gap follows a clear, repeating operational pattern across Alternaleaf's patient journey. Predictable, measurable, and fixable. The right system layer built on Alternaleaf's existing infrastructure converts leakage into recoverable revenue at scale.
