

Ali Ijaz

Punjab, Pakistan • aliijaz9656@gmail.com • [linkedin](#) • [+923289858284](tel:+923289858284)

Flutter Developer with over 1.5 years of professional experience, skilled in creating scalable and user-friendly mobile applications for iOS and Android. I consistently deliver clean, efficient, and maintainable code across real-world projects, with expertise in state management, API integration, and modern Flutter architecture patterns.

Professional Experience

Flutter developer

Regal Tech (Sahiwal)

Nov 2025 – Present

- Developed and maintained high-performance mobile applications using Flutter.
- Managed the entire app development lifecycle independently, from initial concept and design to development, testing, and deployment.
- Integrated multiple third-party libraries and REST APIs to add functionality such as payment gateways and social media logins.
- Converted a web-based platform into a fully functional mobile application.
- Engineered responsive UIs based on client mockups, ensuring a seamless user experience across both iOS and Android platforms.
- Integrated **real-time tracking, payment gateways, and push notifications** to enhance app functionality.
- Implemented **Google Maps and Mapbox** for real-time location tracking and display.
- Integrated **Firebase Analytics** for event tracking and user behavior analysis.

Flutter developer

AI 3D Scanning Solution (Sahiwal)

May 2024– Nov 2025

- Implemented clean architecture and the GetX, Riverpod ,Provider state management

- Integrated RESTful APIs and Firebase services (Firestore, Authentication) to enable real-time data synchronization and user management.
- Collaborated with a team of developers using Git for version control in an Agile environment participating in weekly sprints and code reviews.
- Implemented **app localization** for multi-language support, expanding market reach.
- Developed and maintained 3+ cross-platform mobile applications from concept to deployment on Google Play Store using Flutter and Dart

Virtual University of Sahiwal

2025 - present

BS Data Science (Pursuing)

Skills

Flutter & Dart: Proficient in building feature-rich, cross-platform mobile applications with Flutter, leveraging Dart for clean, maintainable code using modern programming principles.

Google Maps Integration: Implemented custom maps, route plotting, and location-based services using Google Maps SDK, including advanced features like geofencing and clustering.

Live Tracking: Developed live tracking modules with real-time updates for delivery, logistics, or ride-hailing apps, ensuring minimal latency.

Payment Integrations: Seamlessly integrated payment gateways like Stripe, Razorpay, and inapp purchases for a secure and smooth checkout experience.

Mapbox: Customized mapping solutions using Mapbox for offline maps, dynamic styling, and advanced routing features.

State Management (Bloc Pattern, Riverpod, Getx): Proficient in managing complex app states using Bloc, Riverpod, ensuring predictable and efficient state management.

App Localization: Implemented multi-language support with Flutter's localization framework, ensuring apps cater to global audiences with dynamic language switching.

Background Services: Designed efficient background services for tasks like location updates, notifications, and offline data syncing.

Http Skilled in consuming RESTful APIs using HTTP for robust and efficient network management in Flutter projects.

JSON Serialization: Experience with code generation and manual JSON serialization for mapping data models seamlessly between APIs and the app.

Offline Storage: Expertise in integrating local storage solutions like SQLite, Hive, and SharedPreferences for offline-first apps.

Push Notifications: Integrated FCM and custom notification systems for user engagement, including deep links, media-rich notifications, and segmentation.

Firebase: Experienced in Firebase suite, including push notifications, analytics, crash reporting, remote config, and app distribution for app scalability and quality assurance.

Adjust Events: Setup event tracking for marketing and analytics using Adjust SDK, optimizing user acquisition campaigns.

Version Control (GitHub): Strong collaboration and version control skills, using branching strategies and pull requests for effective teamwork.

MVVM & MVC: Implemented structured design patterns like MVVM and MVC to improve code reusability and maintainability in large-scale projects.

In-App Purchases: Configured and implemented in-app purchases on both Android and iOS, ensuring a seamless user experience for monetization.

Method Channels: Integrated native Android through Flutter's Method Channels, enabling platform-specific functionality such as camera access, payment systems, and custom UI components.

OAuth and Authentication Systems: Developed secure authentication flows using Firebase Auth and social login integrations (Google, Facebook, Apple).

Cloud Functions: Utilized Firebase Cloud Functions and other serverless platforms to handle complex backend logic, such as event triggers and notifications.

Responsive & Adaptive UI Design: Created highly responsive and adaptive UIs with Flutter, ensuring optimal user experiences across various devices and screen sizes.

Performance Optimization: Optimized app performance by reducing frame drops, optimizing rendering pipelines, and memory management using tools like Flutter DevTools.

Deep Linking & Dynamic Links: Implemented deep linking and Firebase Dynamic Links for seamless navigation and improved app discoverability.

App Modularization: Adopted modular architecture to break down applications into reusable, independent modules for easier maintenance and scalability.

Code Obfuscation & Minification: Configured Dart obfuscation and code minification for enhanced app security and smaller APK/IPA sizes.

Video & Audio: Developed streaming features using Flutter plugins like `video_player`, `just_audio`, and custom implementations for real-time media handling.

Analytics & Event Tracking: Implemented detailed analytics with Firebase Analytics, Adjust, Braze, and custom events for data-driven decision-making.

Real-Time Communication: Developed chat and collaboration features using Firebase Realtime Database for instant updates.

Third-Party SDKs: Integrated third-party SDKs, including AdMob (ads), Agora (video/audio calling) enhancing app functionality.

Cloud Storage Integration: Implemented cloud storage solutions like Firebase Storage

Cross-Platform Plugins: Developed custom Flutter plugins to integrate native functionality and share reusable code across projects.

Custom Widgets Development: Built reusable custom widgets and UI components adhering to Material Design and Cupertino guidelines for cohesive app design.
